

# Center a Div?

Here are 5 ways using CSS

# Hello Everyone

Centering a div is the most impossible thing.

In this post we are going to see different ways to center a div.

# 1. Centering with Flexbox

Flexbox is a modern way to center content both vertically and horizontally:

```
.container {  
  display: flex;  
  justify-content: center;  
  align-items: center;  
  height: 100vh;  
}
```

## 2. Centering with Grid

CSS Grid can also center content:

```
.container {  
  display: grid;  
  place-items: center;  
  height: 100vh;  
}
```

## 3. Centering with Absolute Positioning

You can center a div using absolute positioning:

```
.container {  
  position: relative;  
  height: 100vh;  
}  
.centered-div {  
  position: absolute;  
  top: 50%;  
  left: 50%;  
  transform: translate(-50%, -50%);  
}
```

## 4. Centering with Margin Auto

For simple horizontal centering, use `margin: auto`:

```
.centered-div {  
  width: 50%;  
  margin: 0 auto;  
}
```

## 5. Centering with inline-block display

For inline or inline-block elements:

```
.container {  
  text-align: center;  
  line-height: 100vh;  
}  
.centered-div {  
  display: inline-block;  
  vertical-align: middle;  
  line-height: normal;  
}
```
